# **WEATHER SYNOPSIS BY REGION**

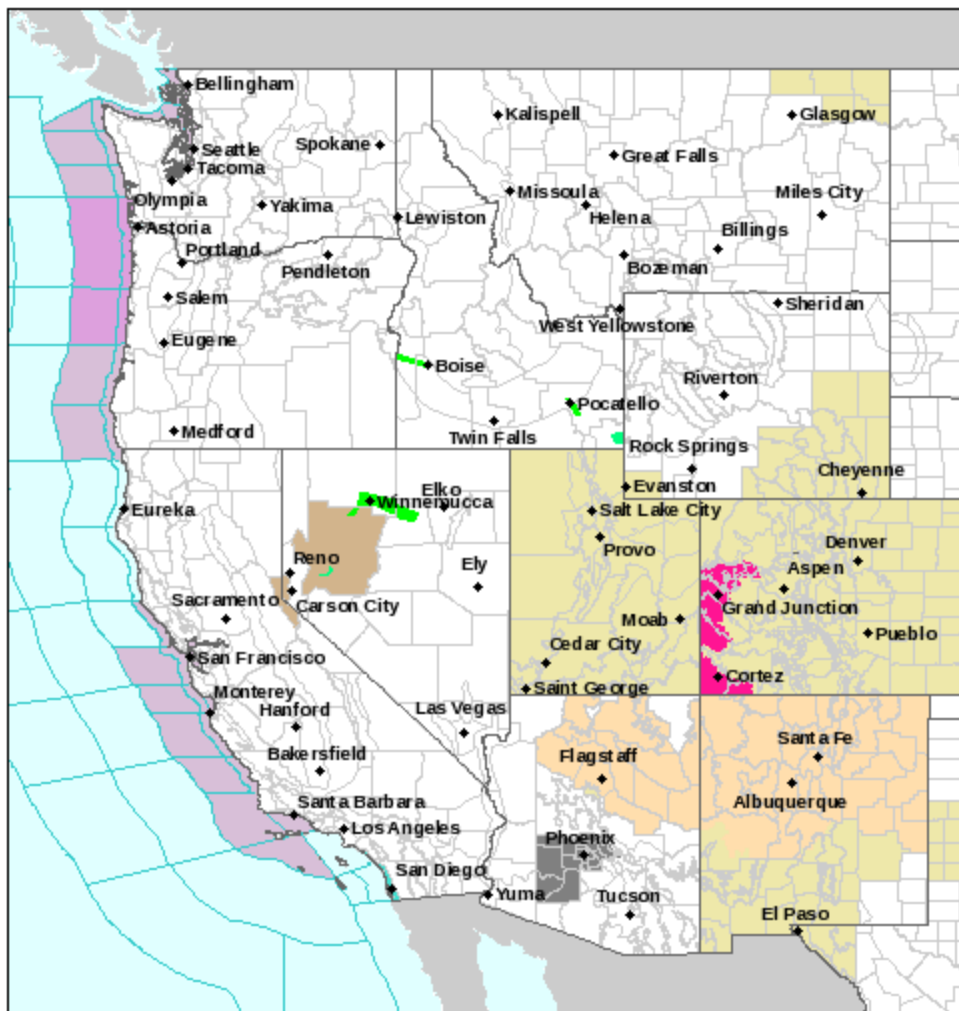

## **NORTHERN CALIFORNIA**

A very weak surface boundary moved quickly across the north coast early this morning providing 0.01 inches of rain to the weather office thus far. Radar returns currently showing some light rain moving across the Humboldt / Trinity county border but returns are very light. This feature will continue to move east as it dissipates. Forecast models continue to be insistent on some type of moist low level onshore flow into the north coast later today thus mostly cloudy and cooler conditions are expected while a little more light rain is not out of the question. Model guidance then shows a series of surface lows impacting the Pacific Northwest Monday and Tuesday.

## **SOUTHERN CALIFORNIA**

A cooling trend can be expected this weekend as low pressure moves across the West Coast. Skies will be mostly clear except for the development of some night and morning stratus and fog across the coastal plain late tonight and Sunday morning. For next week, temperatures will be a few degrees above seasonal normals with some gusty northwest to north wind each day.
